

WALT: To understand how animals and plants are adapted to survive within their habitat

Using your knowledge of adaptation, label how this dragon could have adapted to survive within its habitat.

What features would a dragon need to survive within this habitat?

Now it is your turn to design and create your own dragon that is well adapted to survive within your chosen habitat. Please draw and label your dragon and habitat below.

Dragon:

Habitat:

Solid thick chest plates for protection
Muscular arms for crushing prey
Sharp teeth to rip through flesh
Vast wing span to fly away from predators or to swoop down on unsuspecting prey
Powerful spiky tail to swish predators out of the way
Black skin for camouflage
Sharp claws to rip flesh of prey

Blue skin to camouflage against habitat
Strong eyesight to be able to see prey and predators at night time
Vast wing span to be able to fly over the towering trees
Eyes on the side of it's head for peripheral vision
Thick skin to stay warm in the cold environment
