**LO: To identify and describe the key features of mountains.**

Useful web links for mountain features:

<http://www.primaryhomeworkhelp.co.uk/mountains.htm>

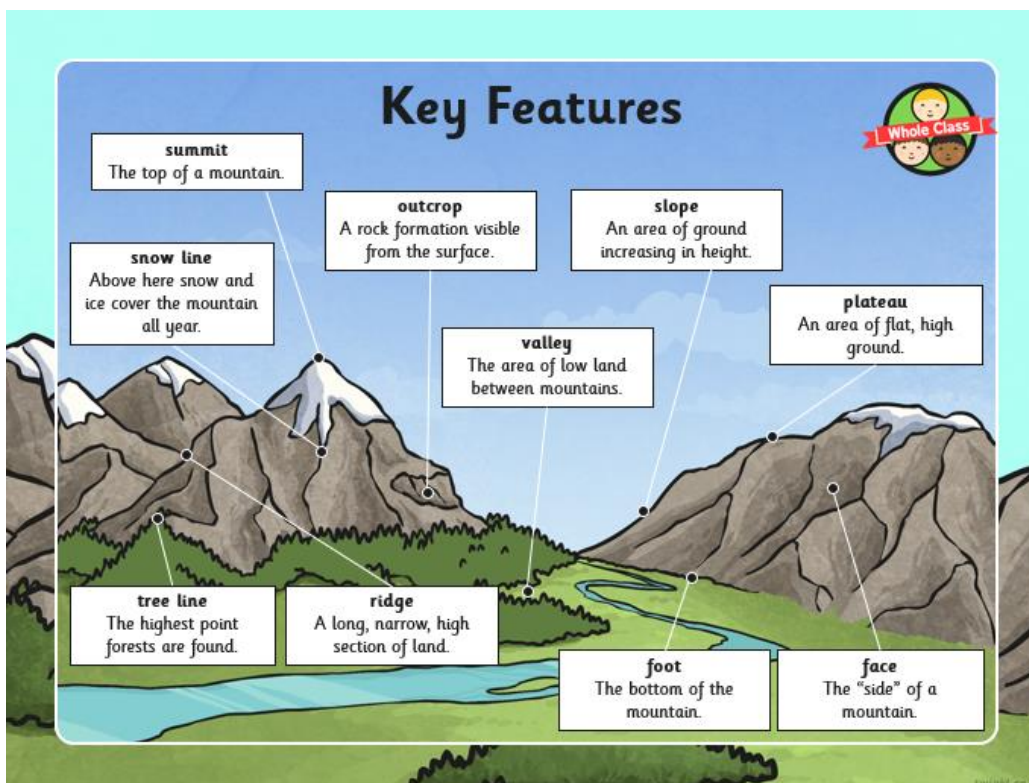

<https://www.3dgeography.co.uk/mountain-words>

We have been thinking about mountains in our geography lessons and looked at mountain ranges around the world and the highest mountains of the UK. This week we are thinking about the features of mountains.

On SharePoint, there is a link to a mountains PowerPoint that will help you with some of the understanding for this lesson and then you have some mountain features work to complete in the pack you brought home.

This work is exactly the task you would have been competing in class, as the main focus was to know the vocabulary and what part of a mountain it referred to.

In case you have difficulty with the PPT, I have produced this sheet to further support you.

This is the main vocabulary that you will need to know, but there are other useful features to understand when learning about mountains. Perhaps you could set yourself the challenge of finding out about different features and an extension to your work.

Ben Nevis is the highest mountain in the UK. Here are some different pictures of the mountain. Can you label them with any of the features you have learnt about?

Can you do the same for these images of Snowdon, Scafell Pike and Slieve Donard?
