

LO: To investigate the reflectiveness of different materials.

The next sheet contains instructions for how to make your own periscope. If you can, have a go at this and use it to help you understand how a periscope works. It's OK if you are unable to complete this task at home. You can use shiny paper or card instead of safety mirrors, if you have any.

# Making a Periscope

Follow these instructions to make your own working periscope.

## You will need:

A cereal box

A pair of scissors

2 safety mirrors

Sticky tape

### Step 1

Carefully open up your cereal box and lay it out flat.

### Step 2

Stick the 'mirror' templates in the centre of the wide panels of the cereal box.

### Step 3

Stick the 'window' templates in the centre of the narrow panels of the cereal box.

### Step 4

Carefully cut along the lines for the mirrors, and cut out the windows.

### Step 5

Use sticky tape to stick the cereal box back together.

### Step 6

Push the mirrors through the mirror lines you cut, and out the other side of the box so they are held firmly in place.

You should now be able to use your periscope to look around or over things! Look through one viewing window to see an image from the other window.
