

What comes
from eggs?

We have been looking at what comes from eggs this half term. We have been also looking at life cycles of different animals.

We had to change the Brooder everyday to keep the chicks clean. We talked about what the chicks eat and drink and where they live.

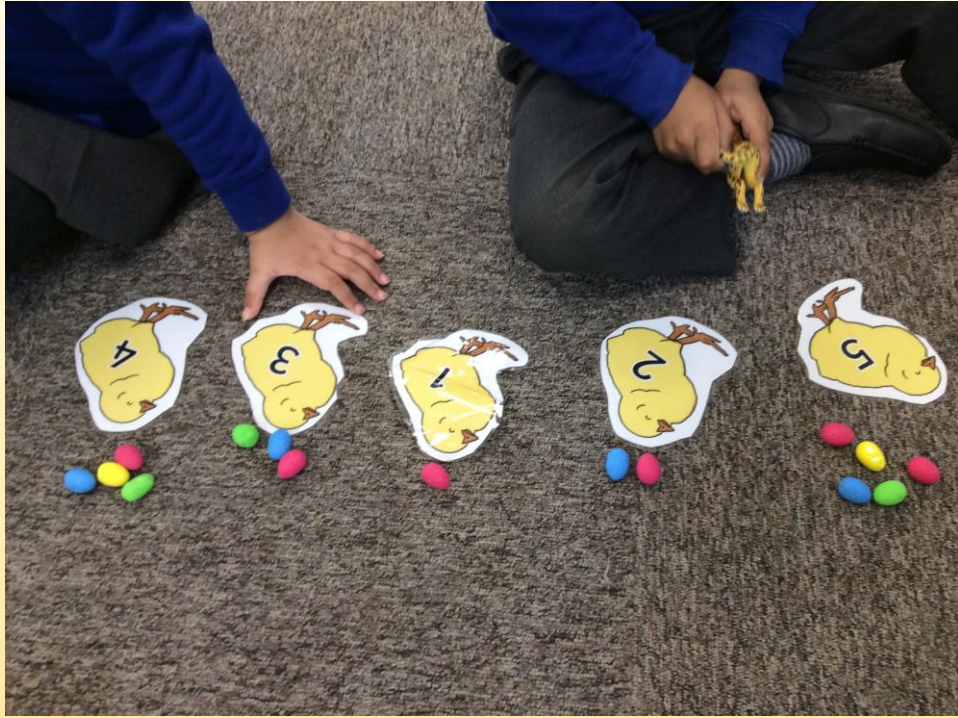

The children were very careful when handling the chicks and we got to hold them. We looked at how they changed.

We have been completing observational drawings of our chicks and adding our name to our picture.

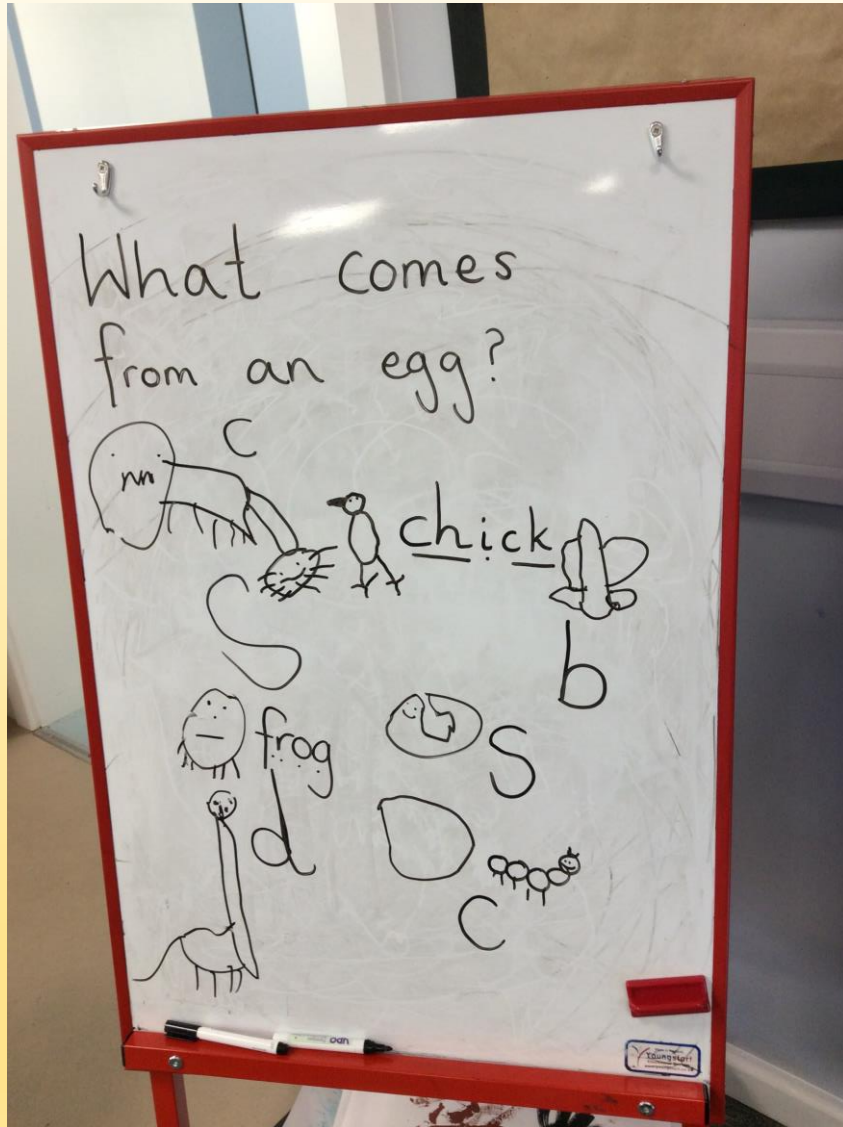

We also had eggs in our investigation area. We have been talking all about what animals come from eggs. We had to guess what might be inside!

In Maths, we have been practicing matching numeral to quantity. We have also been looking at repeating patterns.

We have also been practicing saying the initial sound in words e.g. s-snake. We created our own poster of animals that come from eggs. The children helped to draw the picture and write some sounds.
